Work

Summary

Source: Mercedes

- increasing demands for efficiency on in-vehicle communication
- compliant with rigid real-time constraints
- flexible support for weakly constrained traffic
- significant importance for safety, reliability or comfort

# Problem Statement

- Wide variety of products for real-time Ethernet
- No analysis yet that proves feasibility for in-vehicle networks
- No simulation tools for in-vehicle Ethernet networks

Choice of Time-Triggered Ethernet [2] by TTTech:

- Standard Ethernet protocol extension
- best-efforts network traffic and hard real-time traffic on same wire
- well scaling, can satisfy further requirements on bandwidth
- protocol adds timeslots to standard Ethernet
- synchronization to a global timebase
